

SKY HOUSE

An off-grid observatory for sky, light and wind

Sky House sits on a sage-covered rise in north-central Washington, twenty miles south of the Canadian border. Conceived as an observatory, its steel-clad form frames the valley, the rock outcrops and the ever-changing sky.

Inside, whitewashed timber wraps a double-height living room, a cook's kitchen and a sleeping loft. Small inventions reward a closer look: a bed that winches up to reveal a sunken tub, a rain shower that opens to the outdoors.

Fully off-grid, with solar power, a private well and a wood stove, it is a rare chance to own a published, architect-designed retreat on 40 private acres.
